

Adjustable Tripod Mount for 20x80LW

The Oberwerk Adjustable Tripod Mount is ideal for mounting front-heavy binoculars, such as the Oberwerk 20x80LW. The vertical mount post can be adjusted fore and aft to obtain perfect balance on the tripod head.

The mount is supplied with two mount adapters- one that attaches to the brass tripod adapter socket, and one that replaces the brass tripod adapter socket. The preferred installation is to replace the brass tripod adapter socket, but the other adapter is provided for those that don't want to permanently modify the binocular.

To remove the brass tripod adapter socket, loosen the small set-screw (as shown above), then unscrew the socket using a large flat-blade screwdriver. Install the mount adapter in its place, then tighten the set-screw to prevent the adapter from loosening.
