

25/40x100 Long Range "Classic Edition"

Oberwerk 25/40x100 Long-Range Observation Binocular "Classic Edition" views the converging fountains at Dayton's Riverscape

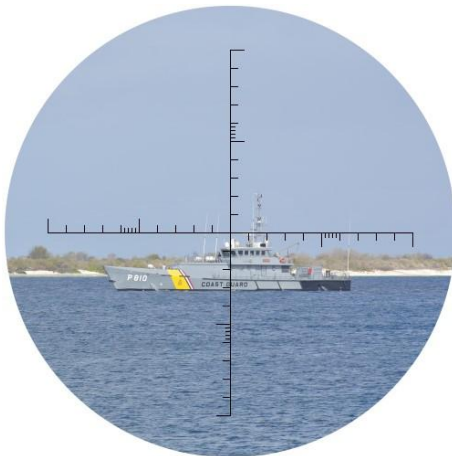

The legendary border-guard binocular, the 25/40x100 Long-Range Observation Binocular, with 4" diameter semi-apochromat triplet objective lenses. This is the ultimate optical instrument for terrestrial observation. For decades, this Carl Zeiss-designed binocular was available only to East German and Chinese militaries. Now the same factory is producing these in partnership with Oberwerk, using the latest optical technology. The US Government has recently deployed hundreds of these (the very same binocular you can buy) to Middle Eastern war zones where they are protecting our troops and security forces.

True giants, they are two feet in length and weigh over 26 lbs! Rotating ocular turrets allow wide-angle viewing at 25x, and high-power viewing at 40x. Apparent field of view is a very wide 67°. Range-finding reticles (as shown at left) can be used to determine size of target or distance to target.

This is the ultimate binocular for terrestrial observation. If you've got a home with a view, enjoy it to the utmost with this magnificent instrument!

Comes complete with our gorgeous American-made TR3 hardwood tripod, in Pecan Poplar, Slate Gray Poplar, Light Honey Maple, and dark and rich Walnut. The TR3 tripod can also be custom laser-engraved.

3-year Limited Warranty.

Range-finding reticles show size of target or distance to target.
