

Viewing from Berthoud Pass (11,370 ft. elevation) at the Continental Divide in the Colorado Rockies

The Oberwerk Sport HD (High Definition) Series include an 8x32, 8x42, and 10x50. They feature high-performance at a moderate price, and are perfect for bird-watching, hunting, nautical usage, and sporting events. Oberwerk's signature broadband multi-coatings are found on every air-to-glass surface (fully multi-coated), and the roof prisms are phase-coated for highest-possible image quality. The eyecups are continuously adjustable- simply twist to move them in or out. Don't worry about getting them wet- they are completely waterproof.

The HD II models, in 8x32 and 8x42, are identical to the standard HD models, but feature ED (Extra-low Dispersion) objectives, which completely eliminate chromatic aberration (false color fringing), for perfect color rendition . The HD II models are among the lowest-priced ED binoculars on the market, making them a great value for the birder on a budget!
